

# Lok Jagruti Kendra University (LJ University)

## University with a Difference

(Lok Jagruti Kendra University Established by Gujarat Act No. 19 of 2019)

### Role Play:

Role play in School of Pharmacy is a dynamic and interactive teaching method that allows students to simulate real-life scenarios encountered in professional practice. It involves acting out specific roles such as a pharmacist, patient, or doctor to enhance communication, clinical reasoning, and problem-solving skills. This approach is particularly useful in developing patient counseling abilities, ethical decision-making, and interprofessional collaboration. For example, students may role-play situations like explaining medication use, managing side effects, or recommending over-the-counter treatments. Through these exercises, learners gain confidence in their ability to handle diverse patient interactions, address concerns, and provide accurate information. Role play also fosters empathy by encouraging students to see situations from the patient's perspective, promoting patient-centered care. Overall, role play serves as a valuable experiential learning tool in pharmacy education, bridging the gap between theoretical knowledge and practical application.
